Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          encephalopathies, neuropathies, memory loss, dementia, depression, problems and opportunistic infections. The populate act as antagonists of graphs mediate heurotaxisty and subsequent neuronal degeneration. This enables therapeutic treatment of ally infection and other inflammatory neurological diseases, including multiple sclerosis, tropical spastic paraparesis and Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SAPHO syndrome: synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne wulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acces proteins. These antibodies can be used to downraymate expression and activity of P. acces polypeptides and therefore treat P. acces infections. The antibodies may also be used as diagnostic agents for determining P. acces presence, for example, by enzyme linked immunoscribert assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              presence or absence of P. acres in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          nervous system, however it is particularly involved in the inflammatory lesions associated with ache vulgaris. A method for detecting the

```

probes which are derived from genomic sequences expressed in the human brain. They can be used to awasure gene expression in brain cell samples which may enable the diametric and improved treatment of nervous system.

such as Altheims's disease

multiple sclerosis, achizophrenia

The present invention provides a number of single exon nucleic acid Example 4; SEQ ID NO:  $\Re E^{RB}$ ; 650pp + Sequence Listing; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT
                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                  are useful as medicaments, for diagnosis and/or treatment of diseases which require antagonistic activity of a chemokine e.g. inflammatory diseases. HIV infection, tumours, and anglogenesis, and hematopoicsis related diseases, including auto-immune diseases, atherosclerosis, pulmonary diseases and skin disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a truncated CoC shemoking motocyte observable protein 2 (MCF2) containing amino acids 6.76 of the mature protein. The invention relates the generation of amino-terminal truncated CoC chemokines, having chemokine antagonistic activity. The new chemokines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New amino-terminally truncated C-C chemokines have antagonistic activity for treatment of immune, inflammatory and infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    regulated on activation normal T-cell expressed and secreted; RANTES; truncation: antagonist medicaments diagnosis; inflammation; infertion; tumour; andiogenesis, hematropoles.

The invention relates the generation of aminoctorminal crumcated CC chemokines, having chemokine antagonistic activity. The new chemokines are useful as medicaments, for diagonistic activity. The new chemokines and/or treatment of diseases which regular antagonistic activity of a chemokine e.g. inflammatory diseases, HIV infection, fundous, and andiogenesis and hematopolesis—related diseases, including auto-immune diseases, atheroscierosis,

The present sequence represents a chemokine receptor ligand. The present of ingand can be incorporated into the conjugates of the invention. The conjugate comprising a targeted agent and a confident of the conjugate binds to a chemokine receptor ligand. The conjugate binds to a chemokine receptor receptor. The conjugates are used for formulating a medicament or for contracting in internalisation of the targeted agent in cells bearing the receptor. The conjugates are used for formulating a medicament or for contracting disorders associated with inflammatory responses resulting from contraction, proliferation and migration of immune effector cells. The conjugates states comprise secondary tissue damage such as contral nervous system (CMS) injury. CMS inflammatory diseases, inflammatory bowel diseases, inflammatory joint diseases, inflammatory by the inflammatory or renal diseases, inflammatory lung diseases, inflammatory consall diseases, inflammatory thyroid diseases, inflammatory and diseases, inflammatory lung diseases, inflammatory consall diseases, inflammatory thyroid diseases such as thyroiditis, or contraction contractions and contractions are diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local
                   here the antigen present is the composition is a tumour associated antigen. The use of APC claimotaxins provides an accelerated immune response in a bast following administration of antigen, a more effective temponse to administratification, in exposure to, very small quantities of
                                                                                             infectious pathmyrnic agents (bacteria, virus, etc.,) prior to expected or possible exposure, for treating cancers, melanomas, throughout carcinomas, lung and breast cancers, renal cell carcinomas etc.
                                                                                                                                                                              separately. Synthetic (mimetic) or naturally occurring chemokines may be used. The polypeptides of the invention are used to induce an immune response by recruiting AFEs to areas of antigen contact. The compositions
an antigen (e.g., toxin () pathogen) due to increased autigen uptake
                                                                                                                                                                                                                                                                                                      subject, in the manufacture of a medicament, where the APC-chemotaxin is a chemokine polypeptide or its variant, or a polynocleotide encoding the chemokine polypeptide or its variant. The invention has antitumour,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of a composition containing an antigen presenting cell-chemotaxin which is a chemokine polyreptide or its variant or a polynucleotide encoding the protein, for inducing immune response to an antigen in a
                                                                                                                                                                                                                                            and may be administered in the same mixture as the APC chemotaxin or
                                                                                                                                                                                                                                                               Can contain and antimicrelial activity. The compositions of the invention can contain one or more ortigens (or antigen containing polynucleotides)
                                                                                                                                                                                                                                                                                                                                                               describes the use of a composition containing an antigen presenting cell (APC) -chemotaxin for inducting an inmune response to an untigen in a
                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of a human chemokine polypeptide designated hMCP-2, used in the compactions of the invention. The specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 7; Fig 2; 60pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1
                                                                                                  The present invention describes a method for inducing an immune response to an antigen in a subject. The method comprises administering a composition containing an antigen presenting real chemotaxin of composition containing an antigen-presenting real chemotaxin and containing an antigen-presenting real chemotaxin of composition containing an antigen-presenting and chemotaxin by appendix of its variant. The AFC-chemotaxin has cytostatic, antimicrobial and containing the activities, and can be used in variant production. The method can be used for inducing or enhancing an immune response, or or for providing protection from exogenous foreign infectious pathogenic or for providing protection from exogenous foreign infectious pathogenic capents prior to expected or possible exposure, or to individuals capents prior to expected or possible exposure, or to individuals capents prior to expected or possible exposure, and tumours. C. c. breast cancer, lung cancer, carcinomas, melanomas, and tumours. C. the present sequence represents a human monocyte chemotactic protein 2 present invariance and sequence, which is used in an example from the corresponding and protein a protein and contains and contains a contains and contains a contains and contains a contains a contains and contains a contains a contains a contains a contains and contains a contains

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB15786
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Misc-difference 47
                                                                                                                                             The present invention concerns the identification of a number of chemokines which can be used to produce derivatives, agonists and achemokines which are then useful in disease treatment. The chemokines antagonists which are then useful in disease treatment. The chemokines antagonists which are then useful in disease treatment. The chemokines can be used to treat diseases such as these can be used to treat diseases such as autommune diseases, atheroscierosis, osteoporosis, HIV inherition and autommune diseases, atheroscierosis, osteoporosis, HIV inherition and AIRS, psoriasis, inflammatory diseases, hypertension, hasophil-mediated AIRS, psoriasis, inflammatory diseases, hypertension, hasophil-mediated diseases, endotroxemia, myocardial infarction, acute incharmia and diseases, endotroxemia, myocardial infarction, cute incharmia and remumatoria architis, and can be used to prevent strokes and as remained therapy for the same diseases, as well as in the production of gene therapy for the same diseases, as well as in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               rheumatoid arthritis; contraception

                                                                                                                             몽
                                                                                                                                                              Š
                                                                      RESULT 14
                                                                                                                                                                                                                                                                                                        CC The invention relates to polynucleutides encoding murine, Julies Fig. CC human ectaxin polypeptides. The ectaxin polynucleotides are useful for commodulating ensinophil chemotaxis, for increasing ensimphil chemotaxis, for increasing ensimphil chemotaxis, for increasing ensimphil chemotaxis, for increasing ensimphil chemotaxis, for increasing ensimphilis of the events, and for improving prognosis with tumourigenesis, and for calso useful for treating inflammation and tumourigenesis, and for ceducing inflammation and cytotoxic damage caused by ecsinophils, for e.g. during asthmatic reactions, essimphilis pneumonia and allorgic constitutis, parasitic infections and ecsimphili cardiac diseases. The vasculitis, parasitic infections and ecsimphili cardiac diseases. The constitution polynucleotides are also useful for modulating histamine release by modulating estaxin activity or expression during anaphylaxis, curticaria and altergic reactions. They are useful for detecting and continuing ecsimphil mediating conditions, and in anti-cancer gene curtoring essingbil mediating conditions, and monocyte chemoatitiactive protein (MCP) 2 fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 13

(bacteria, virus, etc.,) prior to expected or possible exposure; for treating cancers, melanomas, thyroid carcinomas, lung and breast cancers, renal cell carcinomas etc., here the antigen present in the composition is a tumour-associated antigen. The use of Apc-chemotaxins provides an accelerated immune response in a host following administration of antigen, a more effective response to administration of or exposure to very small quantities of au antigen (e.g., toxin or pathogen) due to increased antigen uptake by APCs, and more effective anti-tumour
                                                                                                                                                                                                                                     antigen containing polynumleotides) and may be administered in the same mixture as the APC-chemotaxin or separately. Synthetic (minetic) or naturally occurring chemokines may be used. The polypetides of the invention are used to induce an immune response by recruiting APCs to areas of antigen contact. The compositions of the invention are useful for providing protection from foreign infectious pathogenic agents
                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of a chimeric chemokine polypeptide (bybrikkine) derived from tunnan chemokine hMCF 2 (AAC78390) and murine chemokine mMDC (AAG78392) used in the compositions of the invention. The specification describes the use of a composition containing an antigen presenting cell (APC)-chemotaxin for inducing an immune response to an antigen in a subject, in the manufacture of a medicament, where the APC-chemotaxin is a chemokine polypeptide or its variant, or a approximation is a chemokine polypeptide or its variant, or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of a composition containing an antigen presenting cell-chemotaxin which is a chemokine polymeptide or its variant or a polymecleotide encoding the protein, for inducing immune response to an autique in a
                                                                                                                                                                                                                                                                                                                                                                         compositions of the invention can contain one or more antigens (or
                                                                                                                                                                                                                                                                                                                                                                                           polynucleotide encoding the chemokine polypeptide or its variant. The invention has antitumous cytostatic and antimicrobial activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 5; Fig 2, 60pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                    The present invention describes a method for inducing an immune response to an antigen in a subject. The method comprises administering a composition containing an antigen-presenting cell chemotaxin composition containing an antigen-presenting cell chemotaxin according to the chemotaxin, where the APC-chemotaxin is a chemokine polypeptide, are interested in a polypeptide or contained to a polypeptide encoding the chemokine polypeptide or content and can be used for inducing an encoded in a production. The method can be used for inducing or enhancing an immune response, confort providing protection from exogenous foreign infectious pathogenic confort providing protection from exogenous foreign infectious pathogenic conforts prior to expected or possible exposure, or to individuals confort to expected or possible exposure, or to individuals confort to expected or possible exposure, or to individuals confort to expected or constant and the method may be used to treat cancers confort to expected or constant and the present cancers to the present sequence represents an exemplary chimeric chemokine from the present of invention for the design of hybrikings (chimeric chemokines).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                  Pref N is the buffer of results predicted by classe to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score
